

Project Charter

Enqun Wang (EW), Yiyen Zhou (YZ)

April 21, 2016

Problem Statement

Data from January throughout April, 2016, from First P2P, reflects an *average 1.0370%* five-day increase rate of trading volume of the platform with around *15% defective values*. Based on the financial professional knowledge, operation condition of the company, and the financial market environment, it is believed that a five-day increase rate is normally distributed with constant variance, and a value that *less than 0.83%* (*assumed to be constant in our project*) is regarded as a defective value, which can lead to a reduction in benefit of the company.

Project Objective

Increase the five-day increase rate of the trading volume from *1.04%* to the *1.10%* by the end of the second quarter (June 30, 2016); therefore the proportion of defective values drop from *15%* to *9%* (*67% improvement*), given the normality with constant variance assumption.

Project Team

Name	Role	Comments	Phone
Enqun Wang	Operation Analyst	Organize the project and assign the detailed work to team members	(720) 231 5851
Yiyen Zhou	Operation Analyst	Finish what the leader assigned and give advises	(970) 294 5303
Chee-Yong Tan	Operation executive officer	Adjust the strategies	

Project Definition and Scoping

Metrics (unit of measure):

- The five-day increase rate (%) of trading volume.
- The percentage (%) of five-day increase rate of trading volume less than 0.83%.

Critical to Satisfaction (linkage to customer):

Individual investors and companies with financing needs are two major types of our clients. A relatively high percentage (%) of five-day increase rate of trading volume less than 0.83% can result in financial products of higher prices, therefore individual investors would earn less money and companies looking for finance would waste more money. Furthermore, it might lead to a reduction in benefit of the internet finance company.

Defect Definition (include opportunity):

Any five-day increase rate less than 0.83% is regarded as a defective value, which can result in financial products of higher prices, therefore individual investors would earn less money and companies looking for finance would waste more money. Furthermore, it might lead to a reduction in benefit of the internet finance company. We assume that the criteria value (0.83%) is a constant in the scope of our project.

Scope of Project:

The project focuses on the first two quarters of 2016, from January 1, 2016 to June 30, 2016. The data is collected at April 20, 2016 from the database of the company, thus we scope this project from January 1 to April 20.
